

Amendments to the Specification

In the Abstract, please amend the following.

According to an example embodiment, there is a testing ~~Testing~~ device for testing a phase locked loop having a power supply ~~input, input.~~ ~~said testing device comprising:~~
The testing device comprises a power supply unit for providing a power supply signal V_{DD} having a variation profile to the power supply input of the phase locked loop, wherein a width and height of said variation profile are formed in such a way, that the voltage controlled oscillator is prevented from outputting an oscillating ~~output signal~~
~~output signal.~~ ~~U,,,,, a means~~ There is a means for disabling a feedback signal to a phase comparator of the phase locked loop such that said phase locked loop is operated in an open loop mode, and a meter for measuring a measurement signal of the phase locked loop, while said power supply signal is provided to the power supply input.
